

# Guideline Document

## Setup environment development

### 1. Install maven

- Download maven from
- Unzip the archive to folder <MAVEN\_HOME> , and add path to <MAVEN\_HOME> /bin folder to your PATH environment variable

### 2. Set up local repository

- Clone remote repository of project HMS (url is [git@github.com:pufm2/hms.git](https://github.com/pufm2/hms.git) or <https://pufm2.github.com/pufm2/hms.git>) to your local computer
- Change to hms folder, run: mvn install

### 3. Import eclipse project

- Run eclipse, choose Import form menu File, and browse to folder hms, then select to import project hms
- Create Eclipse variable MAVEN\_REPO, point it to your local Maven repository (it's in user home folder by default)
